Eur J Pediatr. 2021 Sep;180(9):2871-2878.

- Based on administrative claims data, we confirmed a marked reduction in the number of inpatients for childhood non-COVID-19 acute infections in the post-school-closure period (March – June 2020) in Japan.
- The main part of the reduction was for pre-school children, particularly in respiratory infection and gastrointestinal infection groups.
