

Effects of rotavirus vaccine coverage among infants on hospital admission for gastroenteritis across all age groups in Japan in 2011–2019.

Kishimoto K, Kunisawa S, Fushimi K, Imanaka Y.

Emerging Infectious Diseases. 2024 (accepted).

- A total of 294,108 hospitalizations across 569 hospitals with all-cause gastroenteritis between 2011 and 2019 were identified using data from the Diagnosis Procedure Combination system.
- A higher RV vaccination coverage was associated with a reduced number of hospitalizations in all-age population.
